SUMMARY

AI engineer with a track record of shipping end-to-end ML systems across NLP, predictive analytics, and LLM-powered applications from concept to production. Two internships, two publications, and a hackathon win demonstrating the ability to deliver measurable impact across both research and engineering. Core focus include intelligent systems that extract signal from data and drive decisions at scale.

EDUCATION

Mukesh Patel School of Technology Management & Engineering (NMIMS)

B.Tech in Computer Engineering; CGPA: 3.48/4.0

Mumbai, India

Expected May 2027

TECHNICAL SKILLS

Languages: Python, SQL, C++, Java, JavaScript

ML/AI: TensorFlow, PyTorch, Scikit-Learn, XGBoost, Transformers, LangChain, RAG, NLP, LSTM

Frameworks & Tools: FastAPI, React, Git, Streamlit, Firebase, Pandas, NumPy, REST APIs, TailwindCSS

EXPERIENCE

AI Development & Engineering Intern

May 2026 – Aug 2026

Finifi | AI-Powered P2P & O2C Automation Platform

Remote

- Developed **NLP classification** and **OCR post-processing** pipelines for invoice and PO workflows, reducing manual intervention and improving **document routing accuracy** across enterprise P2P systems
- Built **ML inference services** via **REST APIs** for real-time document intelligence in ERP-integrated finance workflows; designed **preprocessing pipelines** standardizing financial data for downstream **model training and validation**

Machine Learning Research Intern

Aug 2025 – Oct 2025

Suvidha Foundation

Remote

- Researched and optimized **transformer attention mechanisms** for emergent language modeling within cognitive AI project “NeuroGenesisLM,” achieving **18% improvement** in syntactic accuracy over baseline across **3 architecture variants**

PROJECTS

AlphaCross: AI Trading Signal Analyzer | FastAPI, React, XGBoost, yfinance | [GitHub](#)

- Data Mavericks Hackathon Winner** – Built end-to-end trading signal platform designed for **NSE 500 stocks** using end-of-day market data; XGBoost classifier predicting bullish/bearish crossovers within a **3-day horizon**, achieving **78% accuracy** under historical evaluation
- Developed FastAPI backend with **stateless REST endpoints enabling horizontal scalability** and React dashboard; implemented **EMA-based backtesting engine** with detailed trade logs and integrated **GenAI chatbot** for contextual trading explanations

EmoSound: Emotion Detection | Python, Transformers, DistilRoBERTa, Spotify API | [GitHub](#)

- Built multi-modal speech-to-emotion system using **DistilRoBERTa** transformer achieving **89% accuracy** in multi-class settings; optimized inference achieving **1.2s response time**
- Integrated **Spotify OAuth API** with asynchronous request handling for emotion-aware music recommendations via Streamlit, enabling personalized playlists and real-time user feedback

Box Office Revenue Prediction | Python, XGBoost, Scikit-Learn, Streamlit | [GitHub](#)

- Engineered ML pipeline predicting revenue for **4,880 films** using ensemble models and 15+ features; tuned XGBoost achieved **$R^2 = 0.77$, MAE \$43.9M**, deployed Streamlit dashboard with **100+ predictions**, reducing analysis time **60%**
- Published at DACS 2025 Conference** with interactive visualizations and scenario-based predictions

Habit & Mood Tracker with RAG Chatbot | Python, Java, Firebase, Gemini API | [GitHub](#)

- Developed production-grade Android app with Python ML backend processing **500+ data points**, using KMeans and RandomForest achieving **86% accuracy**; architected microservices system with Firebase handling **10K+ queries**
- Deployed Gemini RAG chatbot with caching achieving **<1s response time**, providing context-aware insights across **200+ threads** with **92% relevance score**

ACHIEVEMENTS & CERTIFICATIONS

IEEE Published Researcher | Data Mavericks Hackathon Winner | Top 10/500 – Analytika Datathon | IBM AI Fundamentals | Coursera Supervised ML | SQL 50
